INTRODUCTION

This article summarises new archaeological discoveries and prominent stray finds that have reached institutional collections in Estonia during 2013. The table consists of 105 new places, from which several are multi-layered complex sites including traces of different objects. Altogether 114 new sites are listed, including 40 settlement sites, 17 cemeteries, 13 hoards, 3 sacrificial places, 2 manufacturing sites, 1 camp site and 38 stray finds (Table 1; Fig. 1). The most active discoverer of new sites this year was

- C – Cemetery, Burial place / Kalmistu, matmispaik
- F – Stray find / Juhuleid
- H – Hoard / Peitleid
- ✖ M – Manufacturing site / Tööstusmuistis
- S – Settlement site / Asulakoht
- SP – Sacrificial place / Ohverdamiskohad
- CS – Camp site / Laagripaik

Map / Kaart: Kalle Lange

Andres Vindi (TÜ) with 25 new sites, who is holding this position with some exceptions (e.g. 2012) already years.

The number of discovered sites in 2013 is comparable with average results of years before 2012 (cf. Veldi & Jonuks 2012, table 3); thus the sudden increase of discovered sites, recorded last year (Ots & Rammo 2013) has stopped. The main reason for this trend is the lower amount of fieldwork carried on in the frame of the cross-border project 'Archaeology, authority and community' (hereafter AAC; Valk *et al.*, this volume). As usual, the data about new sites is introduced in two groups: first the landscape surveys organised by archaeologists and institutions, and secondly, the discoveries made by licensed searchers with metal detectors. Although the overall number of new sites has decreased, remarkably more information about new findings made by metal detecting (see below) reached the National Heritage Board. The popularity of detecting is growing as well as the cooperation between the detectorists and the MA. The latter indicates positive influence of the new amended heritage act that came into force in 2011 (Kraut 2012).

INSTITUTIONAL LANDSCAPE SURVEYS

Institutional landscape surveys are mainly related with the Department of Archaeology at the University of Tartu. As in previous years the main focus was on South Estonia. In 2013 the AAC activities took place in lesser extent than previously (Ots & Rammo 2013, 297–298; Valk *et al.*, this volume). This year the focus of the project was on historic Tartu-Maarja parish (Tartu County, led by MA-student Andres Kimber, TÜ) and Kanepi parish (Põlva County, led by MA-student Alo Ervin, TÜ). In Kanepi parish 15 new settlement sites from the Pre-Viking Age to the Modern Period were discovered. Mostly the traces of human activities in Medieval and Modern Period were present, but in six cases also finds from Pre-Viking and Viking Age were found (Table 1). The Kaagvere settlement site is one example for long and continuously inhabited places (no. 54). Arvis Kiristaja (MTÜ Arheoloogiakeskus) who is dealing with Setomaa district and is involved also in AAC activities, found pottery dating from the Late Iron Age until the Modern Period in four sites within historic

Pankjavitsa (Kuutsina, Pelska and Pankjavitsa villages) and Petseri areas (village Kaamenka) on the territory of present-day Russian Federation. In Kambja parish the aim of the AAC project was to inspect and map the natural holy places (Tartu County, led by PhD Marju Kõivupuu, TLÜ). Within this survey one new sacrificial stone was documented (Kõivupuu 2013, 31).

Andres Vindi (TÜ) participated in numerous research trips to Kanepi parish in Põlva County, but he also visited Valga and Tartu Counties. His continuous inter-

est in the prehistoric water bound settlements lead to the discovery of seven new sites on the islands and shores of present-day lakes Kooraste, Keeri, and Pühajärv (nos. 57, 85, 93, 94, 97, 98; Fig. 2) and the Väike-Emajõgi River (no. 99). These sites date mainly from the Stone Age, but also traces from the Bronze Age and from the Iron Age up to the Viking Period were found. In addition Vindi helped to locate settlements from various periods with Andres Tvauri (TÜ) in Jõgeva, Tartu and Võru Counties (nos. 35, 87, 88) and with Karin Vimberg (MA) in Valga County (no. 101). On the island Kloostrisaar in Lake Pühajärv during the fieldwork on a Stone Age settlement site, a small deposit find (no. 96) from the Modern Period was unearthed with the help of metal detector by the excavation team (see also Johanson *et al.*, this volume). Kristiina Johanson (TÜ) and Tõnno Jonuks (EKM) found traces of medieval activities on Angunina peninsula of the same lake (no. 95).

Some new sites were located also in Rapla, Pärnu, Viljandi and Jõgeva Counties. Jüri Metssalu (EKM) reported about a medieval settlement site in Orguse (no. 75; Juuru rural municipality), Tõnno Jonuks about a post-medieval settlement in Pööravere (no. 71; Halinga rural municipality) and Kaarel Sikk (TÜ) about two Stone Age settlements in Mõrdama (no. 70; Vändra rural municipality) and Kaarli (no. 103; Halliste rural municipality). The latter is located on a small island in Ōisu swamp, and hence fits well in the water bounded settlement pattern of Stone Age known already in Valga, Tartu and Põlva Counties (cf. last paragraph; Ots & Rammo 2013, 299). In Jõgeva County Andres Tvauri recorded one new glass furnace of Modern Era in Pajusi (no. 41) and Mauri Kiudsoo (AI) studied a Late Iron Age settlement site in Võduvere (no. 44).

CONTRIBUTION OF THE PUBLIC AND USERS OF METAL DETECTORS

In 2013 193 permits for searching with detecting tools were issued by the National Heritage Board, which is 102 licences more than the year before (Ots & Rammo 2013, 300). 82 archaeological finds or find assemblages unearthed by detectorists were documented in the MA. Mainly jewellery fragments, clothing accessories and coins can be named as findings, but also fragments of weapons and tools were quite numerous (Kangert & Kadakas 2014). A lot of stray finds collected with the help of search devices still need further studies to ascertain whether they originate from an archaeological site. Data about these finds has been gathered mostly from the reports and reviews submitted by licensed searchers to the MA. The majority of the artefacts has reached the archaeological collections of the universities (TÜ, AI) and museums (e.g. Estonian History Museum, Pärnu Museum).

The most actively searched regions in Estonia continued to be Ida-Viru and Harju Counties (cf. Ots & Rammo 2013). In the latter all 16 new discoveries were made by detecting devices and among these three new burial places, two settlement sites and two hoards can be named. Nine stray finds need further inspection in order to ascertain more precisely the context of these finds. Rene Vinkler located two cemeteries (no. 8, 12) and collected finds in one settlement site that date from the Late Iron Age until the Modern Period together with L. Hansen. A long-term settlement site was discovered by Ants Erik in Kulna village (no. 1) and a burial place by Andrei Roosild (no. 2) in Kõmmaste. Numerous stray finds mainly of jewellery and dress accessories were gathered

Fig. 3. Penannular brooch of silver from Lähtse (no. 5).

(AI 7215.)*

Photo / Foto: Ülle Tamla

village (nos. 30–32). In Lüganuse Kalle Kartau discovered two sites with prehistoric finds (nos. 24, 25). Numerous fragments of burnt jewellery from site no. 24 may indicate to a long-term a burial site with cremations (Posti 2014). In addition, among his finds there is a fragment of a socketed axe (no. 24). Sergei Futkin reported about stray finds from the Late Iron Age until the Modern Period in Peetri and Saka (nos. 29, 33; Kohtla rural municipality).

On Saaremaa Island, two settlement sites (in Länga and Püha, nos. 80, 81) and a burial place (in Karida, no. 77) were located in 2013 by Tarvo Vaher and Anton Kallas. The same men collected numerous stray finds from the island as well (nos. 76–79, 82). The finds date from the Late Iron Age until the Modern Period.

Fig. 4. Cannon ball of tin with stone filling from Kriilevälja (no. 47).

as well. Noteworthy are two Roman coins (nos. 10, 13), a 9th century cross guard (no. 11), and a silver brooch (no. 5, Fig. 3).

In Ida-Viru County, Mikhail Stadnik and Eduard Kessel found a sacrificial place from the 5th – 6th centuries in Kohtla (no. 21). After the discovery archaeological field work took place and ca. 700 finds, mainly iron tools and weapons, were unearthed there (Oras & Kriiska, this volume). In addition, Stadnik found two hoards and several stray finds; four of them can be related with burial places (nos. 17, 19, 20, 30) dated to different periods. Especially rich material was detected in the vicinity of the present-day Puru

village (nos. 30–32). In Lüganuse Kalle Kartau discovered two sites with prehistoric finds (nos. 24, 25). Numerous fragments of burnt jewellery from site no. 24 may indicate to a long-term a burial site with cremations (Posti 2014). In addition, among his finds there is a fragment of a socketed axe (no. 24). Sergei Futkin reported about stray finds from the Late Iron Age until the Modern Period in Peetri and Saka (nos. 29, 33; Kohtla rural municipality).

On Saaremaa Island, two settlement sites (in Länga and Püha, nos. 80, 81) and a burial place (in Karida, no. 77) were located in 2013 by Tarvo Vaher and Anton Kallas. The same men collected numerous stray finds from the island as well (nos. 76–79, 82). The finds date from the Late Iron Age until the Modern Period.

In Järva, Lääne, Pärnu, and Rapla Counties four cemeteries (nos. 48, 50, 69, 74), one sacrificial place (no. 69), one settlement site (no. 72) and four stray finds were found (nos. 47–49, 73). Partly the finds related with putative burials in these four sites mentioned in the last sentence originate from the Late Iron Age. In one of the cemeteries (no. 50, Liivi in Kullamaa rural municipality) in addition to the burnt artefacts cremated bones were collected during archaeological fieldwork (Mandel 2014). A cannon ball (no. 47) of 15th – 16th century discovered by Peeter Ütt in Kriilevälja is unique. The shell of the cannon ball is made of tin and it is filled with stones (Fig. 4). In addition to the four hoards (nos. 36, 38, 43, 45) and several stray artefacts found by Detector-

ists' Club of Jõgevamaa (JDK) the detectorists registered in the same county a cemetery (no. 42), a sacrificial place (no. 39), and a settlement site with finds from distinct periods (no. 37). An impressive complex was found in Laiuse (Laiuse rural municipality) where a coin hoard from the Viking Age (no. 39) was found in a probable sacrificial place (no. 38; Kiudsoo, this volume). In addition, on the basis of collected slag pieces archaeologist M. Kiudsoo who examined the place located a putative smithy in the area (no. 40; Kiudsoo 2013).

In Tartu and Valga Counties in South Estonia, three new burial places and a settlement site (nos. 84, 90, 102) have been found by Igor Tšakuhhin, Aleksandr Kotkin and Ants Erik. The cemetery with potential cremation burials in Ōvi (no. 90) dates from the Late Iron Age (Jonuks 2014, 24); the other two cemeteries in Kargaja and Ōruste are from the Modern Era (nos. 84, 102). Among stray finds jewellery (nos. 83, 86, 91) and cannon balls (no. 89) have been recorded.

Jüri Paas led archaeologists to a site in Võru County in the present Koemetsa village (no. 104) that can be interpreted as a camp site for troops during the period of the Russian-Livonian War (1558–1583). Knives, a key, a calk, a cannon ball, arrow heads, and a button represent the era of the Livonian War. In addition, a metal pot from a well with wooden casing was found near this area (Fig. 5).

This year 13 hoards were discovered with search devices. A separate article in the present volume discusses the finds at length and therefore they are not touched upon here: for instance the Viking Age assemblages (nos. 26, 32, 38, 45; Kiudsoo, this volume) and Kõue (no. 3; Kiudsoo & Tamla, this volume). In addition, seven assem-

(TÜ 2311.)

Photo / Foto: Riina Rammo

blages consisting mainly of coins and ornaments, dating from 16th – 17th centuries are listed in the table (nos. 6, 31, 36, 43, 52, 92, 100). A fragment of a head ornament made of coins and chains from Koiva village (no. 92; Fig. 6; Taheva rural municipality) is worth mentioning. The reason for the abandonment of the ornament can be related with the famine in years 1601–1603 or the Swedish-Polish wars in South Estonia in the beginning of the 17th century (Tvauri 2014, 9). In Vaidavere the remains of a wooden chest with nearly 10 000 copper coins (Swedish öre) from the 17th century were found (no. 43). Due to the concentration of copper and its conserving qualities a large piece (38 × 76 cm) of plant-fibre textile has preserved.

ABOUT THE TABLE

A site is reported in this table only if the relevant finds and information has reached the archaeological collections either at the Universities of Tartu and Tallinn or the local museums. Sites are listed according to the county of their location. The name of the site usually refers to the present-day village where it was found. More information about the sites listed in the table can be obtained from the archaeology archives of the University of Tartu (TÜAK) and the Institute of History (AI) of the Tallinn University.

Acknowledgements: Mauri Kiudsoo (AI) and Andres Vindi (TÜ) kindly helped to systematise information and date the collected finds. We are grateful to all archaeologists who contributed to compiling the table and to Tarvi Toome, Ülle Tamla (both AI) and Andres Tvauri (TÜ) for the photos. This study was supported by the European Union through the Regional Development Fund (Centre of Excellence CECT) and by institutional research funding IUT20-7 of the Estonian Ministry of Education and Research. The fieldwork in South Estonia was supported by ENPI Estonia-Latvia-Russia cross-border cooperation programme 2007–2013 in the frameworks of the Project ‘Archaeology, Authority and Community: Cooperation to Protect Archaeological Heritage’ (ELRI-191).

2013. AASTA MAASTIKUINSPEKTSIOONID JA AVASTATUD MUISTISED

Riina Rammo, Nele Kangert ja Kristi Tasuja

2013. aastal avastatud muististest on meieni jõudnud teave 105 uuest kohast. Kuna mitmelt poolt on teada eriaegseid ja -tüübilisi jälgia inimtegevusest minevikus, siis muistiseliikide koguarv on isegi suurem: 114 (jn 1; tabel 1). Nende hulgas on 40 asulakohta, 17 kalmistut, 13 aaret ja peitleidu, 3 ohvrikohta, 2 tootmispaija ja üks uusaegse sõjaväega seostatav laagriase. Lisaks on tabelis loetletud 38 juhuleidu, mille puhul leiupaiga ja konteksti edaspidine lähem uurimine võiks anda täpsemaid vastuseid muistise iseloomu kohta. 2013. aastal avastatud muististe arv on tunduvalt väiksem eelnevast aastast, ent sobib hästi kokku 2000. aastate keskmisega. Põhjus on AAC-projekti välitööde tunduvalt väiksem maht 2013. aastal. Seevastu detektoritega varustatud hobrotsijad on Muinsuskaitseametile üle andnud 30 võrra rohkem leide vörreldes eelmise aasta-ga ning selliste leiuteadete arv on aasta-aastalt kasvanud.

2013. aastal jätkusid süstemaatilised maaстikuinspektsoонid Lõuna-Eesti ajaloolistes kihelkondades seoses piiriülese koostööprojektiga AAC. Projekti välitööd keskendusid 2013. aastal Tartu-Maarja ja Kanepi kihelkondadele, kus eesmärgiks oli avastada uusi muistiseid ja samas kontrollida ka juba teadaolevaid kohiti. Kanepi kihelkonnast avastati 15 uut asulakohta, millest mitmed osutusid pikaaegse ja pideva inimasustusega paikadeks (tabel 1). Arvis Kiristaja kogus savinõukilde asulakohtadelt (alates nooremast rauaajast kuni uusajani), mis jäädvab ajaloolisele Setomaa alale, ent tänapäeval paiknevad Venemaal. AAC-projekti raames jätkus ka töö looduslike pühapaikadega (Kõivupuu 2013; Valk jt, käesolev kogumik).

Andres Vindi, kes oli sel aastal kõige edukam uute muististe leidja (25 kohta), jätkas järvede ja jõgedega seotud kivi- ja rauaaega kuuluvate asulakohtade kaardistamist Lõuna-Eestis. Tema peamised uurimispiirkonnad olid endiselt Valga- ja Tartumaa arvukad väikejärved (nr 57, 85, 93, 94, 97, 98; jn 2). Sarnased tihedalt veega seotud asustusjälgi avastasid lõppenud aastal ka teised uurijad (nr 95, 103). Pühajärve Kloostriisaarelt pärit Raereni kivisteraamiline kann koos mitmete rauast tööriistadega (nr 96; vt Johanson jt, käesolev kogumik), mis on ilmselt maasse peidetud. Lisaks tuvastati uusaegne klaasikoja ase Jõgevamaal (nr 41) ja peamiselt nooremast rauaajast kuni uusajani ajandatud asulakohti Pärnumaal (nr 70, 71), Raplamaal (nr 75) ja Jõgevamaal (nr 35, 37, 44).

Otsinguvhahediga hobiumirijad tegutsesid jätkuvalt kõige aktiivsemalt Harju- ja Ida-Virumaal, kust nende leidude ja andmete põhjal avastati kahekso uut kalmistut, kolm asulakohta, viis aaret, üks ohvrikoht ja 22 juhuleidu (jn 3, 4). Üks tähelepanuväärsemaid leiukohti oli peamiselt 5.–6. sajandisse dateeritud Kohtla ohvrikoht (nr 21), mille avastasid Mihail Stadnik ja Eduard Kessel. Arheoloogiliste uuringutega saadi sealt kokku üle 700 rauast tööriista ja relva (Oras & Kriiska, käesolev kogumik). Jõgevamaal avastati neli aaret, üks kalmistu, üks asulakoht, üks ohvripaik, üks sepikoja ase ja kaks juhuleidu. Näiteks Laiuselt avastatud kompleks koosnes ohvrikohast (nr 39), mis päritub nooremast rauaajast ja samast saadi ka hilisviikingiaegne aare (nr 38; Kiudsoo, käesolev kogumik). Lisaks leiti samast piirkonnast hilisemate arheoloogiliste välitööde käigus sepatööle iseloomulikke jälgia (nr 40; Kiudsoo 2013).

Lõuna-Eestis Tartu-, Põlva-, Valga- ja Võrumaal avastati nii matmispaiku, asulakohti kui ka aardeleide kolm, neile lisandus seitse juhuleidu. Võrumaal Koemetsa külas paiknevad leiuuala (nr 104; jn 5) võib käsitleda Liivi sõja aegse sõjaväe peatuspaigana. Koiva külast leitud peaehe (nr 92, jn 6) on maapinda jääanud töenäoliselt 17. saj alguses. 17. sajandist päritub ka Vaidaverest leitud rahakirst ligi 10 000 Rootsi vaskmündiga (nr 43). Rapla-, Järva-, Lääne-, Pärnu- ja Saaremaa hobrotsijate poolt kogutud leiukohad ja uued muistised on samuti loetletud tabelis I. Viimatinimetatud maakonnast, kust viimastel aastatel on uusi leiuteateid olnud vähe, lisandus 2013. aastal kaks asulakohta, üks kalmistu ja viis leiukohta (nr 76–82).

Tabelis kajastuvad leiad, mis on jõudnud avalikesse arheoloogiakogudesse ning mille leiuandmed on nõuetekohaselt esitatud.
